

Easyvo.

MVP Website Sitemap & Page Architecture

1. Sitemap at a Glance

The MVP should stay deliberately small. The goal is to explain Easyvo quickly and move visitors into the invoice creation flow.

ROUTE	PURPOSE
/	Marketing homepage — explain what Easyvo does, who it is for, and drive users to Create an Invoice
/create	Invoice creation flow — a short multi-step form.
/preview	Review the completed invoice before generating the final document.
/success	Confirmation after the invoice has been generated.
/privacy	Privacy policy.
/terms	Terms of use.

2. Homepage Structure

01 — Navbar

Easyvo logo · Features · How it works · Who it's for · FAQ · Create an Invoice

02 — Hero

Eyebrow → main headline → supporting copy → primary CTA → secondary CTA → iPhone/product mockup.

03 — Value Strip

Simple · Fast · Professional. A compact visual pause rather than four oversized feature cards.

04 — What Easyvo Does

Explain the core flow: business details → customer → items → preview.

05 — Product Showcase

Use real Easyvo UI/screenshots. Show the actual product rather than generic illustrations.

06 — Who It's For

Freelancers · Small businesses · Service providers · Entrepreneurs.

07 — How It Works

Four steps: Add business → Add customer → Add items → Review/generate.

08 — Features

Professional invoices · Itemized billing · Instant preview · Mobile-friendly workflow.

09 — Final CTA

A focused final invitation to create an invoice.

10 — FAQ

Short answers to the most important product questions.

11 — Footer

Easyvo · Product · Help · Legal · copyright.

3. Invoice Creation Flow

Keep the creation experience short and sequential. Avoid turning the MVP into a full accounting dashboard.

STEP	SCREEN	CONTENT
1	Your Business	Business name · address · email · telephone · company logo
2	Your Customer	Customer name · email · address · telephone
3	Invoice Details	Invoice number · invoice date · due date · items · quantity · price · total
4	Review	Business · customer · invoice details · items · edit actions · Generate Invoice

4. Supporting Application Screens

Invoice Preview

Display the completed invoice exactly as it will be generated. Actions: Edit Invoice · Generate PDF · Share Invoice only if implemented.

Success

Confirm that the invoice is ready. Actions: Download Invoice · Create Another Invoice · optional Back to Home.

Empty State

If invoice history exists later: “No invoices yet.” with “Create Your First Invoice.”

Error States

Inline validation for missing/invalid information plus a clear recovery action such as Try Again.

Confirmation Modals

Leaving an unfinished invoice and removing an invoice item should require a clear confirmation.

404

Simple recovery page: “This page doesn't exist.” → Back to Easyvo.

5. Navigation & CTA Architecture

LOCATION	PRIMARY ACTION	SECONDARY ACTION
Navbar	Create an Invoice	—
Hero	Create an Invoice	See How It Works
How It Works	Create My Invoice →	—
Final CTA	Create an Invoice →	—
Create flow	Continue →	← Back
Review	Generate Invoice	Edit
Success	Download Invoice	Create Another Invoice

6. Visual Design System

Typography

Plus Jakarta Sans for headings, navigation, buttons and important UI labels. Inter for body copy, form text and supporting information.

Core Colors

Background #F8FAFC or a very pale blue; surface #FFFFFF; text #0F172A; muted #64748B; border #E2E8F0; primary #2563EB; primary-dark #1D4ED8.

Layout

Maximum content width around 1200px with generous whitespace. Avoid dense, dashboard-like layouts on the marketing homepage.

Corners

Buttons around 10–12px; cards around 16–20px; large panels around 24–28px. Avoid making every element a pill.

Shadows

Soft, restrained shadows. Use borders and spacing as the primary visual structure.

Imagery

Prioritize actual Easyvo UI screenshots and the iPhone product mockup. Avoid generic stock photos and decorative 3D objects.

7. Animation Direction

- Hero/product entrance: subtle fade + upward movement.
- Phone mockup: gentle reveal with a small rotation/scale transition.
- Scroll reveals: sections enter once as they become visible.
- Buttons: tiny hover/press movement, not exaggerated effects.
- Product showcase: use scroll position to reveal actual UI states where useful.
- Avoid constant floating objects, excessive parallax, cursor-following effects, spinning elements and giant gradient animations.

8. Recommended Project Structure

- index.html — homepage
- create.html — invoice creation flow
- preview.html — invoice preview
- success.html — successful generation
- privacy.html — privacy policy
- terms.html — terms of use
- css/style.css — global styles and components
- js/app.js — shared application logic
- js/invoice.js — invoice form/calculation/generation logic
- assets/ — logo, icons, screenshots, phone mockups and other media

MVP principle: build the smallest complete journey first — Home → Create → Review → Generate → Download. Everything else should support that journey rather than compete with it.
